Minimize Downtime, Maximize Equipment Life

Unplanned downtime and emergency call-outs reduce productivity and profitability. Our Process Preventative Maintenance (PPM) program is designed to minimize both, ensuring maximum availability of your equipment and extending the life of your Vapor Control System (VCS).

Our process service engineers will:

+ Visually check your system during operation
+ Adjust operation parameters as necessary
+ Verify condition of rotating equipment and instrumentation
+ Perform any necessary testing to ensure integrity of system and functionality of protective devices
+ Recommend any additional tests and required spare parts

After each visit, you will receive a full report summarizing all findings and any potential concerns compromising safe operation and availability.

Customize Your Maintenance Program

Tailor a PPM program to meet your specific needs with these options:

+ Remote Access: Access via modem for trending of system parameters which could indicate upcoming mal-performance. It also enables remote service support for diagnostic purposes in case of shutdown or instant callout service support.
+ Call-out Intervention: In the event of VCS shutdown, you can contact our expert service team and we will provide diagnostics via phone or in person. After initial contact, in most instances the typical response time is 4 hours for telephone intervention and 72 hours maximum for an on-site visit.
+ Training: Supplementary training from JZHC experts will familiarize local operations personnel with equipment process and design.

Trusting JZHC for your preventative maintenance means you’ll get the same experience and expertise that designed and manufactured the original equipment. That’s smart. That’s JZHC.
Mechanical, Electrical and Instrumentation Peace of Mind

Short on personnel? We can be a part of your team. We partner with local representatives and product/service distributors in many countries. This cooperation allows us to offer regular and/or emergency maintenance in cases when you do not have available personnel for routine service and maintenance. A PPM contract with John Zink Hamworthy Combustion offers many benefits, including:

- Preferential availability of John Zink Hamworthy Combustion service engineers
- Reduced pricing on spare parts
- Greater system availability through improved reliability and less unpredictable down time
- Access to drawings, manuals and other technical information
- Reduced OPEX through extended life of equipment and optimum performance with fewer emergency call-outs and less unpredictable down time
- 24/7 Emergency Response Program
- Back-up on process and technical issues from John Zink Hamworthy Combustion – your VCS original equipment supplier.

No One Knows Our Equipment Like We Do

No one knows your vapor control system better than the experts who designed and manufactured it. That means means no one is better qualified to help keep it performing effectively and efficiently year after year. JCHC site engineers are fully trained and certified to work on VCS equipment and are strategically based to cover installations worldwide.
